

CANFORD microMUSA 12G 4K UHD PATCHCORDS

Developed for use with Canford microMUSA video patch panels. Performance exceeds the requirements of SMPTE ST 2082-1 making them suitable for composite and component video, analogue video, 270 Mb/s SDI, uncompressed 1080i or 1080p HD-SDI video and 4K UHD (2160P60) video up to 12GHz.

The microMusa format offers the highest possible density in a single 1U panel with a maximum of 48 patches possible. A feature of Canford microMUSA video patch panels is a unique positive location feature (“detent”) that indicates when the patchcord is fully mated into the panel whilst additionally providing resistance to disconnection through vibration as found in some environments such as OB vehicles. Designed and made to the same very high standards as our 3G MUSA connectors microMusa U links are not compatible with existing Canford 3G MUSA range due its much smaller form format.

Like the original 3G MUSA system, the microMUSA is a non-normalised system and therefore U-links or patchcords are required to make the circuit.

The microMUSA patchcords are manufactured using Canford branded 12G 4K UHD video coaxial cable which is designed to be both very flexible and withstand repeated flexing. The MicroMUSA connectors are nickel-plated with gold plated centre contacts providing a smooth mating action.

Patchcord cable is black with factory fitted coloured strain relief bushes. Ten different colours aids patchcord identification. Standard lengths 300mm, 450mm, 600mm, 600mm, 900mm, 1.2m. Other lengths may be available on request.
