VNET ETHERNET INTERFACE

Ethernet Interface for VNET

- Power supply for VNET interface devices
- Used when a Power Over Ethernet (PoE) Ethernet switch is not available
- Power of up to two interfaces via A & B outputs
- 10-Year Warranty Program*
- Designed and engineered in the U.K.

The VNET ETHERNET INTERFACE is a rack-mountable device for connecting a Windows PC running VNET Software to any VNET loudspeaker network. Capable of driving a network span up to 1 km and 50 devices, the VNET ETHERNET INTERFACE provides the PC user with complete control, tuning and diagnostics of all devices on the network. Connectivity to a Windows PC or laptop is simple and cost-effective using standard Ethernet cabling, with interconnections between VNET devices via Cat5 cables and RJ45 connectors. The rugged steel enclosure and Ethercon connectors ensure the VNET ETHERNET INTERFACE will provide a long lifetime of reliable service.

Implementation

Power for the VNET ETHERNET INTERFACE can be provided by connecting to a Power Over Ethernet (POE) switch, or through the implementation of the [VNET INTERFACE POWER SUPPLY](#) (available separately), which can power up to 2 VNET interfaces. The VNET INTERFACE RACK MOUNT provides the ideal solution for up to 3 devices to be housed in a standard 1U 19" bay. VNET ETHERNET INTERFACE's ultra-compact footprint fits perfectly into standalone desktop/portable applications, where it can be used in close proximity to a desktop PC or laptop.
